

## Session : Health and social care integration

### Health and social care policies for people with chronic conditions in France : *How to (re)connect parallel universes?*

Marie-Aline Bloch, PhD, Dean of Research and Educational Innovation  
EHESP – French School of Public Health

Léonie Hénaut, PhD, Research Associate Professor  
Center for the Sociology of Organizations, CNRS, Sciences Po Paris

Correspondence to: [marie-aline.bloch@ehesp.fr](mailto:marie-aline.bloch@ehesp.fr)

# Origin and Scope of the research

This presentation is based on a 3-year study conducted with **Léonie Hénaut** about the development of care coordination for people with chronic conditions (including the vulnerable elderly) in France.

Three main interests:

**Part 1-Public policies**

Part 2-Innovation dynamics

Part 3-New professionals

***Elderly & disabled people, mental health, cancer, rare diseases, stroke, brain injury***

Book published on January 8<sup>th</sup> 2014

Study mainly based on :

- Grey literature: official documents, assessment reports...
- Data produced in political sciences, sociology, management studies, public health
- Original case-studies:

## Presentation outline

- ✓ Different groups of people with chronic conditions have been targeted by French public policies but they share similar issues in terms of health and social care coordination
- ✓ Public policies have been developed in parallel for care improvement for each category and present specificities due to different main stakeholders
- ✓ Convergence can be identified recently between these public policies
- ✓ All public policies are facing recurrent difficulties
- ✓ We propose general recommendations based on a double loop and transversal learning process

**Elderly people (>75 y old) ( ~5,8 Millions)**

**Persons with Alzheimer or related disease ( ALD : 0, 29 M)**

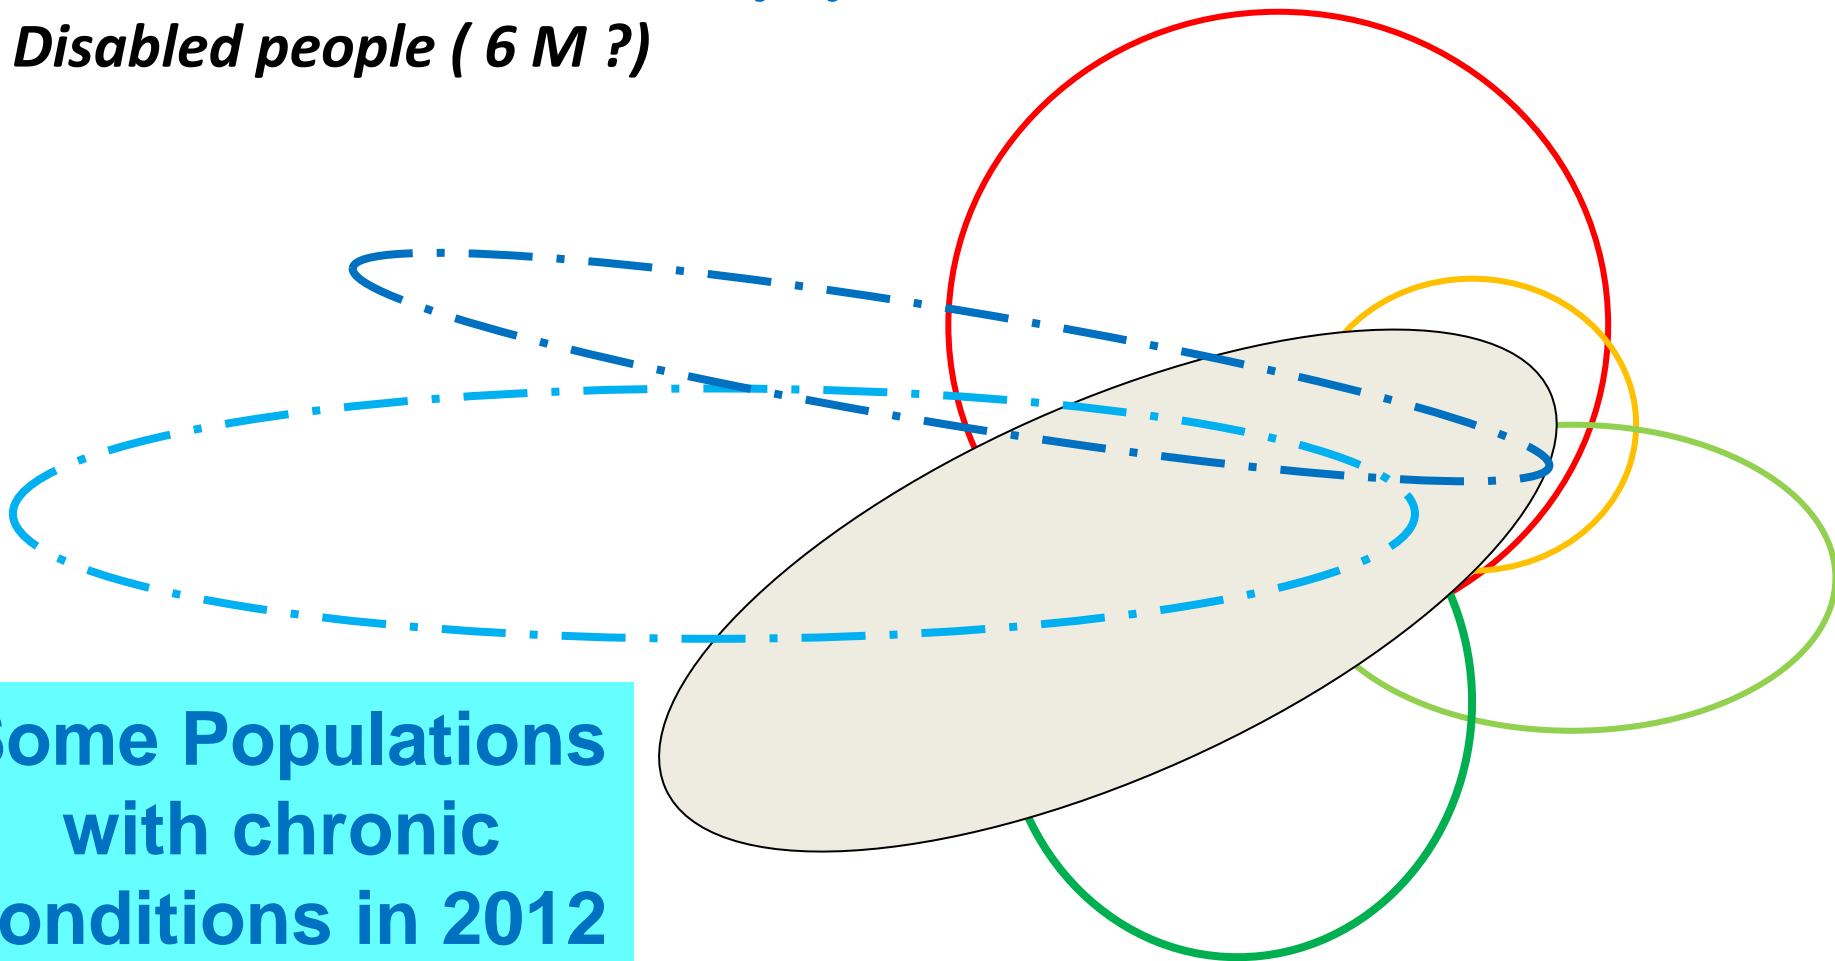

**Persons with mental health disorders (ALD : 1, 16 M)**

**Persons with cancer (ALD : 2 M)**

**Persons with rare disease > 3 M**

**Persons with stroke/brain injury 0,3M new persons each year**

**Disabled people ( 6 M ?)**

**Some Populations  
with chronic  
conditions in 2012**

# What would happen to persons under different regimes/policies ?

Eg : an elderly person having a stroke and a cancer

Common issues  
faced by the persons with chronic conditions  
with regards  
to care coordination and integration

Prof de santé libéraux

# Similar issues

***For persons with chronic conditions and their families*** : access to services, fragmentation, redundancy of assessments, delays

***For professionals*** : difficulties for cooperation, lack of common tools and culture particularly between health and social care

***For organizations*** : funding, competition, flow of information, flexibility

***For health and social authorities*** : regulations, trade-off between large-scale population services and personnalized services

➤ Need to ensure continuity and coherence all along the care pathway

➤ Coordination and integration issues at each level and within levels

Care improvement policies  
have been developed in parallel for each category

and  
present specificities partly due  
to different main stakeholders

# Major steps of the development of the parallel public policies

	Elderly people	Alzheimer	Mental health	Cancer	Stroke/brain injury	Rare diseases & disability	Disabled persons
<1960				hospital based			
in the 60ies	↑ social policy		sector creation				
in the 70 ies							2 Acts
in the 80 ies	decentralisation						
in the 90 ies	Allowance/ medicalization				a major report for Brain inj.		
2000-2008	2 plans	3 plans	1 plan	3 plans		1 plan (diseases)	a main Act in 2005
>2008						1 plan (disability)	
	National health strategy : care pathways				1 plan for Stroke	1 plan (diseases)	
nr of reports							

## Coordination schemes and strategies

Definition: **Coordination is the process by which actions led by different actors are articulated in order to enhance their efficiency**, both in terms of cost and satisfaction for persons, family and professionals

Various **coordination strategies and schemes** were developed by policy makers and healthcare experts (liaison, coordination, integration, case and care management, network...)

.

# Many coordination schemes and strategies were developed

	<b>Elderly people</b>	<b>Alzheimer</b>	<b>Mental health</b>	<b>Cancer</b>	<b>Stroke/brain injury</b>	<b>Rare diseases &amp; disability</b>	<b>Disabled persons</b>
<1960				CRLCC			
in the 60ies	local coordination social services		sectors				
in the 70 ies							SESSAD
in the 80 ies	SSIAD SSIAD		CMP				
in the 90 ies	Geriatric care networks APA team		MH care networks		UEROS	resources centers for disability	
2000-2008	CLIC Home-based hospitalization Geriatric line structure Mobile geriatric team	Memory clinics	SAMSAH psy mobile teams CLSM GEM	canceropoles 3C, RCP announcement setting, UCOG	UNV EPR brain injury line str.	reference centers (disease) competence centers (disease)	SAMSAH/SAVS SSIAD MDPH
>2008		MAIA Case managers for complex needs	CreHPsy				
	PAERPA : care pathways						

# Specificities of each policy

	<b>Elderly people</b>	<b>Alzheimer</b>	<b>Mental health</b>	<b>Cancer</b>	<b>Stroke/brain injury</b>	<b>Rare diseases &amp; disability</b>	<b>Disabled persons</b>
Governance	Ministry	Project and Foundation	Mission	Institute	Project	Foundation	Ministry
Main stakeholders	Professionals	Professionals and family associations	Family associations	clinicians	Professionals and family associations	Family associations	Family associations
<b>Specificities</b>	taking into account the global needs of the person and facilitating home care	dealing with complex situations	to stabilize status and thus facilitate social participation	to give access to the best therapies	to handle the very acute phase to avoid mortality and heavy disability	to get access to the competences	to facilitate social participation

# Consequences of these specificities

	<b>Elderly people</b>	<b>Alzheimer</b>	<b>Mental health</b>	<b>Cancer</b>	<b>Stroke/brain injury</b>	<b>Rare diseases &amp; disability</b>	<b>Disabled persons</b>
Governance	Ministry	Project and Foundation	Mission	Institute	Project	Foundation	Ministry
Main stakeholders	Professionals	Professionals and family associations	Family associations	clinicians	Professionals and family associations	Family associations	Family associations
Specificities	taking into account the global needs of the person and facilitating home care	dealing with complex situations	to stabilize status and thus facilitate social participation	to give access to the best therapies	to handle the very acute phase to avoid mortality and heavy disability	to get access to the competences	to facilitate social participation
<b>Main results</b>	the development of multiple coordination schemes aiming at coherence between the different services	the implementation of intensive case management	the creation of peers groups	a regional and hospital based coordination descending	the creation of neurovascular units in each region specialized in emergency care	the creation of a network of reference centers	the creation of MDPH for global needs assessment connected to the field of education and of employment

## A recent convergence between these public policies

- Since the 2004 Public Health Act :
  - in terms of process :
    - most policies are conducted through large 3 to 5 years national plans
    - Mid-term and final assessment with involvement of the High Council for public health (HCSP) and the National health conference (CNS) including representatives of end-users
  - in terms of content :
    - an increased involvement of general practitioners,
    - the creation of case managers positions,
    - And very recently the notion of care pathway.

# However these public policies are still facing recurrent difficulties

- Many reports too superficial with an insufficient learning process :
  - repeatedly creating coordination schemes ( in the field of elderly)
  - Difficulties to address the real issue (mental health) (garbage can model)
- Plans and assessment procedures not considering conditions for success (change management) and a correct timing (political agenda not compatible with implementation agenda)
- Institutional hurdles : lack of resources, regulatory texts not operational, path dependency phenomenae, bureaucratic compartmentalisation
- Weak participation of end-users and of professionals
- Issues linked to the weak coordination between these policies although populations overlaps: for national and local authorities, for professionals (eg GPs), and for persons with chronic conditions

## Example : Reports in the field of mental health

<b>Juin 2001</b>	Le Livre Blanc des partenaires de Santé Mentale France, associations d'usagers de la psychiatrie, de soignants et de responsables du social dans la cité	Propositions faites lors des réunions de juin 2001
<b>Juillet 2001</b>	Rapport Piel et Roelandt	De la psychiatrie vers la santé mentale
<b>2003</b>	Rapport Cléry-Melin, Kovess, Pascal	
<b>Mars 2003</b>	Le livre blanc de la psychiatrie de Collectif	
<b>Janvier 2009</b>	Rapport Couty	Missions et organisation de la santé mentale et de la psychiatrie
<b>Avril mai 2009</b>	Rapport OPESP Milon au parlement	RAPPORT sur la prise en charge psychiatrique en France,
<b>Aout 2011</b>	Rapport IGAS d'Amara et al.,	La prise en charge du handicap psychique
<b>Octobre 2011</b>	Rapport HCSP	Évaluation du Plan Psychiatrie et Santé mentale
<b>Déc 2011</b>	Rapport de la cour des comptes	L'organisation des soins psychiatriques : les effets du plan "psychiatrie et santé mentale"(2005-2010)
<b>21 sept 2012</b>	Rapport Terra Nova par Chierici et Pradalié	Quelques repères pour la psychiatrie publique
<b>2012</b>	Le livre blanc 2012 de la psychiatrie française	
<b>Décembre 2012</b>	Rapport Milon au parlement	RAPPORT D'INFORMATION FAIT au nom de la commission des affaires sociales (1) relatif à la prise en charge psychiatrique des personnes atteintes de troubles mentaux,
<b>2013</b>	Rapport Couty	Le pacte de confiance pour l'hôpital

# Our general recommendations

- A generic plan should be designed :
  - capitalizing on all policies experiences (take the best of each policy eg for cancer research and clinical competences, for elderly and disabled people using a global assessment process and facilitating social participation and home care)
  - They should be more population based to avoid persons to be the target of different uncoordinated plans/policies
  - including a “conditions for success” section that would be the basis for new plans whatever the target population.
- Local contexts should be taken into account, thus plans should leave more margin to field actors to adapt the plan at their level
- Assessment teams should include more end-users and persons competent in change management
- Innovation coordinators should be involved at national and local levels to facilitate the implementation process

## Questions and discussion

Complementary slides

# I. Background and methodology

## A broad study of integrated care in France

The fragmentation process is twofold:

Horizontal fragmentation: between care providers	Vertical fragmentation: between policy makers
(1) “ <i>sanitaire</i> ” or cure area	(1) local level
(2) “ <i>social</i> ” or social work area	(2) regional level
(3) “ <i>médico-social</i> ” or home-based and residential care area	(3) national level

→ Numerous **integrated care schemes** have been conceived and implemented at various levels by various actors over the past decades: inter-organizational networks, new technologies, multidisciplinary teams, gate-keeping organizations, case management and integration strategies...
