

Social care covid recovery & resilience

Learning lessons from international responses to the covid-19 pandemic in long-term care systems

Nuffield Trust and Care Policy & Evaluation Centre (LSE)

Co-PIs: Adelina Comas-Herrera & Natasha Curry

Nuffield Trust team: Nina Hemmings & Camille Oung

CPEC team: Joanna Marczak; Will Byrd; Max Salcher; Klara Lorenz

Acknowledgements

This study is funded by the National Institute for Health Research (NIHR) Policy Research Programme (NIHR202333). The views expressed in this publication are those of the author(s) and not necessarily those of the NIHR or the Department of Health and of Social Care, the London School of Economics or the Nuffield Trust

Team members: Adelina Comas-Herrera (PI), Natasha Curry (co-lead), Erica Breuer, William Byrd, Margaret Dangoor, Nigel Edwards, Stefanie Ettelt, Jose-Luis Fernandez, Nina Hemmings, Martin Knapp, Margrieta Langins, Shoshana Lauter, Klara Lorenz-Dant, Camille Oung, Maximilian Salcher-Konrad, Laura Schlepper, Sian Smith and Jessica J. Yu, in collaboration with the National Care Forum.

International contributors: Margarita Estevez-Abe, Alis Sopadzhian, Diny Stekelenburg, Tine Rostgaard, Nick Zonneveld

Other sessions from the project

Friday 9th September 14.00-15.15 – COVID impact on LTC systems:

England's social care sector during Covid-19 (Nina Hemmings)

Saturday 10th September 11.15-12.30 – COVID impact on LTC systems:

A conceptual framework for the English social care system to identify opportunities for learning from evidence and from other countries' experiences of the Covid-19 pandemic (Adelina Comas-Herrera)

What long-term care interventions and policy measures have been studied during the Covid-19 pandemic? Findings from a systematic mapping review of the scientific evidence published during 2021 (William Byrd)

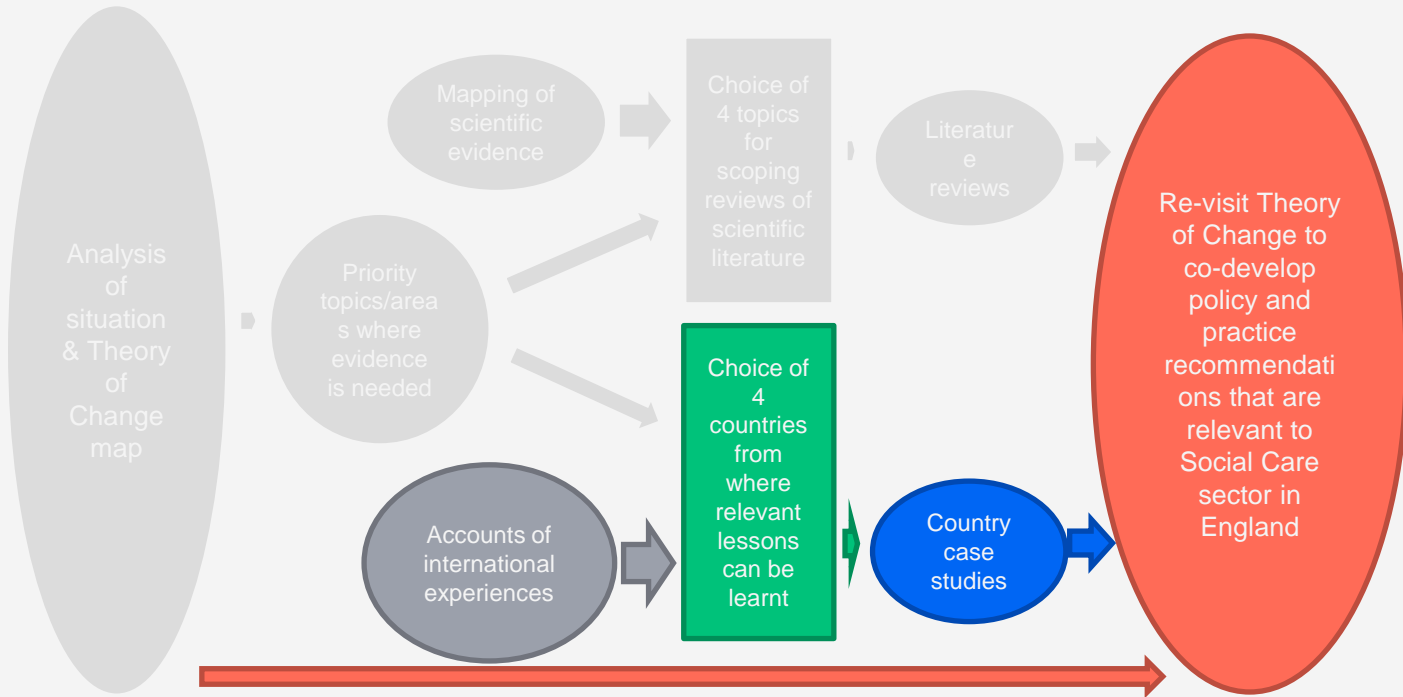

Our research questions

What can we learn from **international evidence** and experiences in order to support the **recovery of the social care sector**, and to inform the development of policies to **prevent and manage future outbreaks** in social care settings in England?

Aims of the presentation

- Present our project methodology using country case studies
- Reflect on our experience of undertaking cross-country comparative research during Covid-19
- Present early case study findings from France and potential learning for England

How the project works

Resilience: Priorities for reform

The system:

- Clarity of accountability
- Visibility of social care
- Collaboration with NHS/other local systems
- Preparedness

People:

- Understanding complexity & diversity
- Understanding the workforce
- Building in support for unpaid carers

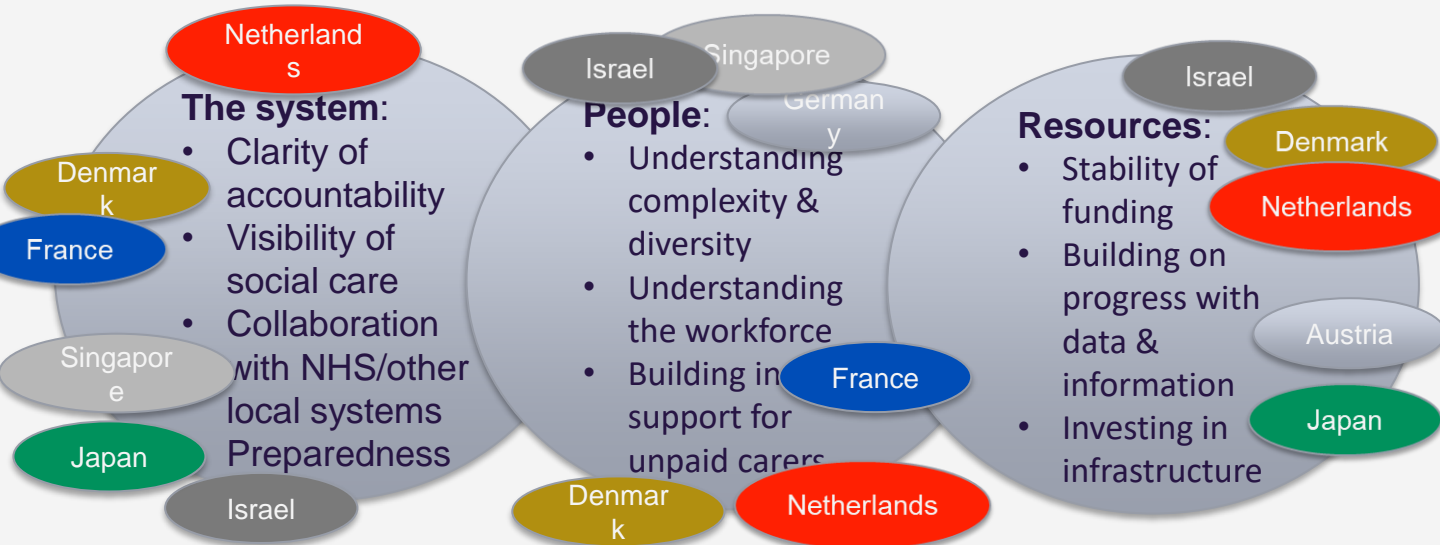

Resources:

- Stability of funding
- Building on progress with data & information
- Investing in infrastructure

Mapping themes to countries

What we settled on...

| France  | Japan  | Netherlands  | Denmark  |
|---|---|---|--|
| <p>Similar challenges to England going into the pandemic</p> <p>Prioritisation of different elements of reform to support recovery, e.g. around workforce</p> | <p>Strong governance structures already in place</p> <p>Preparedness plans due to experience of other pandemics</p> | <p>Emergence of new governance structures during Covid-19</p> <p>Existence of client councils in care homes</p> | <p>Strong tradition of collaboration + focus on community</p> <p>Seemingly good performance during first waves of Covid-19</p> |

Reflections on methods

Iterative: Refining our learning and knowledge as we have progressed

Rapid turnaround: Feeding in factual learning to stakeholders

Consultants as a strategic resource: Drawing from consultant expertise and networks to finesse our knowledge

Finding consultants within the timescale: identifying consultants and being able to protect their time

Adapting to Covid-19: Changing nature of the pandemic and country responses

Methods

| Theme | Code | Notes |
|--------|---|---|
| System | Integration, innovation and collaboration | <p>solidarity with much more concrete actions Use of integration networks such as CPIAS (local centres for health related infections): were able to put in place mutualised nurse hygienists in care homes. These actors already in place but not very visible. Local Trust put in place geriatric hotline and web conferences - stepped into that space by default Rolled out mobile geriatric teams through the Trust, using the local integration network could be replicated at regional level. Did mobile testing as care homes struggled to access testing, geriatric hotline (still exists for coordinating doctors, coordinating nurses or care home managers Role in peer support. Now trying to reorient people towards omnidoc (secure messaging service through health insurance). Web conferences also organised through local integration networks - access to geriatricians, infectious disease specialists, hygienists... Now continuing but only once per month. FAQ website - had to stop after first wave as almost full time. Put in place ethical reflection and support cells (ERED: Espace de reflection ethique de Bretagne) - to have emergency crisis ethical reflection cells. These innovations have stopped as ARS wanted to take over (power struggles) to put in place an FAQ, even though questions were being addressed in web conferences. Nothing to keep the platform going - has died down. Certain things will continue on a local level but not generalised - subject to a certain vulnerability. Innovations driven by particular individuals</p> |

in the

EX of

System pre-pandemic

Reform long overdue

- Implementation of reforms incomplete
- Debate over nature of long-term financing for more than 20 years

Complex financing arrangements and challenges in access

- Several sources of funding: local authorities, integrated care structures...
- High out-of-pocket payments

Workforce issues well evidenced

- Low satisfaction, poor working conditions and pay
- Consequences on provision with high vacancy levels

Providers of care under strain

- High number of people in residential and nursing homes
- Outdated infrastructure and limited drivers of quality and improvement

What Covid highlighted

Fragmented accountability limited the visibility of social care in the national response

- “The crisis was seen as a crisis in hospitals when in reality the crisis was in the home” (Carers association)
- “Local authorities in our region stood out through their absence” (Geriatrician)
- Restrictive policies on visiting in care and nursing homes

Workforce difficulties were exacerbated by the pandemic

- High turnover and difficulties in recruiting
- Insufficient attention given to staff in response

Some policies helped mitigate Covid’s impact

- “Whatever it takes” policy helped maintain stability
- Existence of preparedness plans in residential and nursing homes following 2003 heatwave
- Improved collaborative working through increased flexibility afforded to local integrated networks and federations

Achieving recovery: key reforms

Reforms were introduced following a sector-wide consultation in 2020, including:

Increased salary rates

Minimum tariff rate for home care

Major investment into care home infrastructure

Introduction of social care as a 5th branch of social security

Many of these reforms were planned prior to the pandemic – did Covid act as a window of opportunity?

Learning from Covid: be adaptive and consider unintended consequences

 Preparedness plans have value but need to be flexible enough to adapt to different events (e.g. pandemics, climate change, terrorism), and assigned clear lines of accountability

 Workforce reforms are essential but need to be fully thought through to avoid unintended consequences

- Pay increases not initially introduced to all parts of the sector (e.g. in domiciliary care)
- Extending salary increases to other roles required some negotiation to obtain: “On the question of salary increases, in domiciliary care, it’s catastrophe” (Geriatrician)
- Significant exits from the sector as a result – threat to stability
